Prottime Elite PRO Transponder

Protime Elite PRO Transponder

- 8 days autonomy
- 3 h charging time (without memory effect)
- Transponder is powered down in its charger
- The detection is done up to 500 km/h
- Identification of the driver

Description

The transponder Protime Elite Pro is the most powerful and most accurate in our range. It includes the identification of the driver by using a radio frequency strap.

This transponder is delivered with a Lithium-ion battery or with a direct connection to the vehicle's battery.

When the transponder is in the charger, the power down is automatic, which offers autonomy of several months. Only one charge per year is necessary to maintain the transponder in condition. The information on the level of charge is sent to the decoder when the transponder passes over the loop.

The rechargeable transponder has 8 days autonomy when it is continuously used. A tricolour LED indicates the level of charge and the autonomy. The autonomy is shown by 1 to 4 flashes every 10 sec.:

- 4 green flashes for a 75 to 100% autonomy
- 3 green flashes for a 50 to 75% autonomy
- 2 green flashes for a 25 to 50% autonomy
- 1 green flash for a 10 to 25% autonomy
- 1 red flash for a 0 to 10% autonomy (< 24 hours)

The LED turns red when the transponder is in charge and turns green when the charge is complete.

Features

Lithium-ion battery :

- Autonomy : 8 days
- Charging time : 3 hours (without memory effect)

Specifications

- Emission : magnetic induction
- Maximum speed : 500 km/h (310 mph)
- Maximum height of detection : 2,80 m (9 ft)
- Temperature range : - 20 °C to + 70 °C (-4 à 158 °F)
- Dimensions (with Lithium-ion battery) : 65 X 44 X 22 mm (2.6 x 1.7 x 0.9 in)
- Dimensions (with 12V Power) : 68 X 27 X 23 mm (2.7 x 1 x 0.9 in)
- Weight : 80 g (2.8 oz)
